

Tiling Windows Over Data

- (a) the data length is an exact multiple of the window's width w
there are 6 full windows and no remaining observations

- (b) the data length is 2 less than 6 times the window's width w
there are 5 full windows and $w-2$ unwind observations

- (c) the data length is 2 less than 6 times the window's width w
the $w-2$ unwind observations are placed at the start
